Abstract

The Partner Violence Victimization Among LGBTQ Youth Measure (Langenderfer-Magruder et al., 2016) was developed to assess the prevalence of partner violence (PV) victimization in lesbian, gay, bisexual, transgender, or queer (LGBTQ) youth. This measure was designed for a study that examined the correlates of PV in a community sample of LGBTQ youth (N = 140). PV victimization was assessed from eleven items addressing various forms of PV (i.e., psychological, verbal, physical, sexual). Identical response sets were given for each question. The items were collapsed into a single variable indicating whether or not the youth had ever experienced any type of PV victimization. Psychometrics specific to this measure were not reported by the authors. (PsycTESTS Database Record (c) 2016 APA, all rights reserved)

Details

Commercially available

Construct	Partner Violence Victimization
Classification	7800: Trauma, Stress, and Coping
Purpose	The purpose of the Partner Violence Victimization Among LGBTQ Youth Measure is to assess the prevalence of partner violence victimization in lesbian, gay, bisexual, transgender, or queer (LGBTQ) youth.
Format	Identical response sets are given for each of 11 items (1 = no partner in past year, 2 = never, $3 = 1-2$ times, $4 = 3-4$ times, $5 = 5-6$ times, $6 = 7$ or more times).
