## **Perpetration of Intimate Partner Violence Measure**

@misc{ author={Scholes-Balog,Kirsty and Hemphill,Sheryl A. and Kremer,Peter J. and Toumbourou,John W.}, year={2016}, title={Perpetration of Intimate Partner Violence Measure}, note={Copyright - PsycTESTS® is produced and copyrighted © by the American Psychological Association, all rights reserved.; Date revised - 20160711}, abstract={The Perpetration of Intimate Partner Violence Measure (Scholes-Balog et al., 2016) was developed for a survey where items were drawn from a modified version of the Communities That Care youth survey (Glaser, Lee Van Horn, Arthur, Hawkins, & Catalano, 2005; Hemphill et al., 2011) that was adapted for use in young adults. Perpetration of intimate partner violence (IPV) in the past 12 months was assessed at two time points in a sample of Australian young adults (n = 2262) with a scale containing 5 items, each assessing perpetration of different types of behaviors, e.g.: "I pushed, grabbed, slapped, shoved my partner, or threw something at my partner that could hurt." Items were drawn from the revised Conflict Tactics Scale (Straus, Hamby, Boney-McCoy, & Sugarman, 1996), and in some cases, were modified for the purpose of the study. The frequency of each behavior was scored. Two measures of IPV were derived from these items: physical IPV (3 items) and emotional IPV (2 items). To be consistent with the other measures of violence, these measures were dichotomized; a score of 1 indicated that the participant had perpetrated at least one IPV behavior at least once in the past 12 months, whereas a score of 0 indicated that the participant had not perpetrated IPV in the past 12 months. ## **Abstract**

The Perpetration of Intimate Partner Violence Measure (Scholes-Balog et al., 2016) was developed for a survey where items were drawn from a modified version of the Communities That Care youth survey (Glaser, Lee Van Horn, Arthur, Hawkins, & Catalano, 2005; Hemphill et al., 2011) that was adapted for use in young adults. Perpetration of intimate partner violence (IPV) in the past 12 months was assessed at two time points in a sample of Australian young adults (n = 2262) with a scale containing 5 items, each assessing perpetration of different types of behaviors, e.g.: "I pushed, grabbed, slapped, shoved my partner, or threw something at my partner that could hurt." Items were drawn from the revised Conflict Tactics Scale (Straus, Hamby, Boney-McCoy, & Sugarman, 1996), and in some cases, were modified for the purpose of the study. The frequency of each behavior was scored. Two measures of IPV were derived from these items: physical IPV (3 items) and emotional IPV (2 items). To be consistent with the other measures of violence, these measures were dichotomized; a score of 1 indicated that the participant had perpetrated at least one IPV behavior at least once in the past 12 months, whereas a score of 0 indicated that the participant had not perpetrated IPV in the past 12 months.
